INTERNET SERVICES

RLW Technology was established to target opportunities in the fast-paced and continuously evolving ICT industry. With the wealth of expertise and knowledge held by our team, resulting from experience in ICT consulting, the foundation was set to deliver our best of breed ICT products and services to Corporate and SME clients throughout Africa.

Offering a number of connectivity solutions tailored to specific client requirements.

- **FIBRE OPTIC**
- **LICENSED MICROWAVE**
- **LTE & DSL IPC**
- **SATELLITE**
- **Business Network Security**
- **SDWan**
- **Voice Over IP Solutions (VOIP)**
- **Hosted PBX Solutions (VBX)**

WIFI

RLW Technology deploy best of breed enterprise WiFi solutions, accompanied by powerful WiFi analytics tools, across South Africa. WiFi solutions deployed in high density retail environments, taxi ranks, stadiums, train stations, hotels, etc., offer landlords, tenants and guests extensive value.

We also offer high quality WIFI Solutions for Home users.

Indoor or Outdoor, and WIFI Management covered under one roof.

Whether you are looking for a Hotspot management tool or interested in meshing your WiFi deployment, RLW Technology can customize a solution to meet your requirements.

CCTV

RLW Technology supply and install high quality surveillance solutions for all environments. We ensure to supply quality brands and quality workmanship.

- IP Cameras
- PTZ Cameras
- Thermal Cameras
- Heat Tracking Series
- Display and Control
- Network Storage
- Network Video Recorders
- Digital Video Recorders

BACKUPS

we offer data backup with protection (antivirus, malware protection, patch management and cloud backup) all from one console.

- Ransomware protection
- Patch management
- Cloud backup

While backups are still essential for restoring your data, they're not enough to protect your business alone. IronTree now combines cyber protection with system backups – administered from a single console.

A holistic view of your environment helps you to mitigate known and unknown threats.

- Easy to install, use and manage
- Immediate protection
- Affordable
- Month-to-month or annual licenses

Authorized Reseller

SECURITY

As cybercriminals become more sophisticated in their attacks, it's getting harder for businesses to mitigate them. All it takes is one unpatched system, malicious URL, or malicious file for cybercriminals to gain access to your network, encrypt files, and deploy ransomware.

With our proudly South African in house custom built, low cost firewall. DN-Guard offers an affordable solution for all environments, from your home, school or business.

Protecting you from Malware, Phishing attacks, DDos Protection, No Adult content or unwanted Advertisements.

Ensuring layer 7 protection for all.

We are also proudly certified as a Fortinet partner to offer Enterprise solutions to any environment. Onsite / Cloud Firewalls, VPN or IPSEC Tunnels.

Panda Security, a top of the line anti-malware product that's so good it can detect and prevent potential attacks. It's smart technology that monitors and classifies everything on your computer before it becomes a threat.

DISASTER RECOVERY

What is Disaster Recovery

DR works hand in hand with backup. Following a disruption of any kind, it provides automated availability of your critical data, systems and applications along with the certainty that each interdependent process will be recovered in the correct order and restored to the correct recovery point at the right time.

RLW Tech disaster recovery solution is built on top of IronTree Backup Cloud, and together they protect your data and your critical business systems. In the event of a disruption, your data and systems are instantly spun up to a managed cloud recovery site. Following the recovery of the local disaster, your newly generated data in the recovery cloud can be recovered back to your original location to the same or dissimilar hardware.

The quick recovery time means that your corporate workload is never in danger of being offline for long, and you can be sure of keeping your business systems going with, at most, a 15-minute delay for a typical workload.

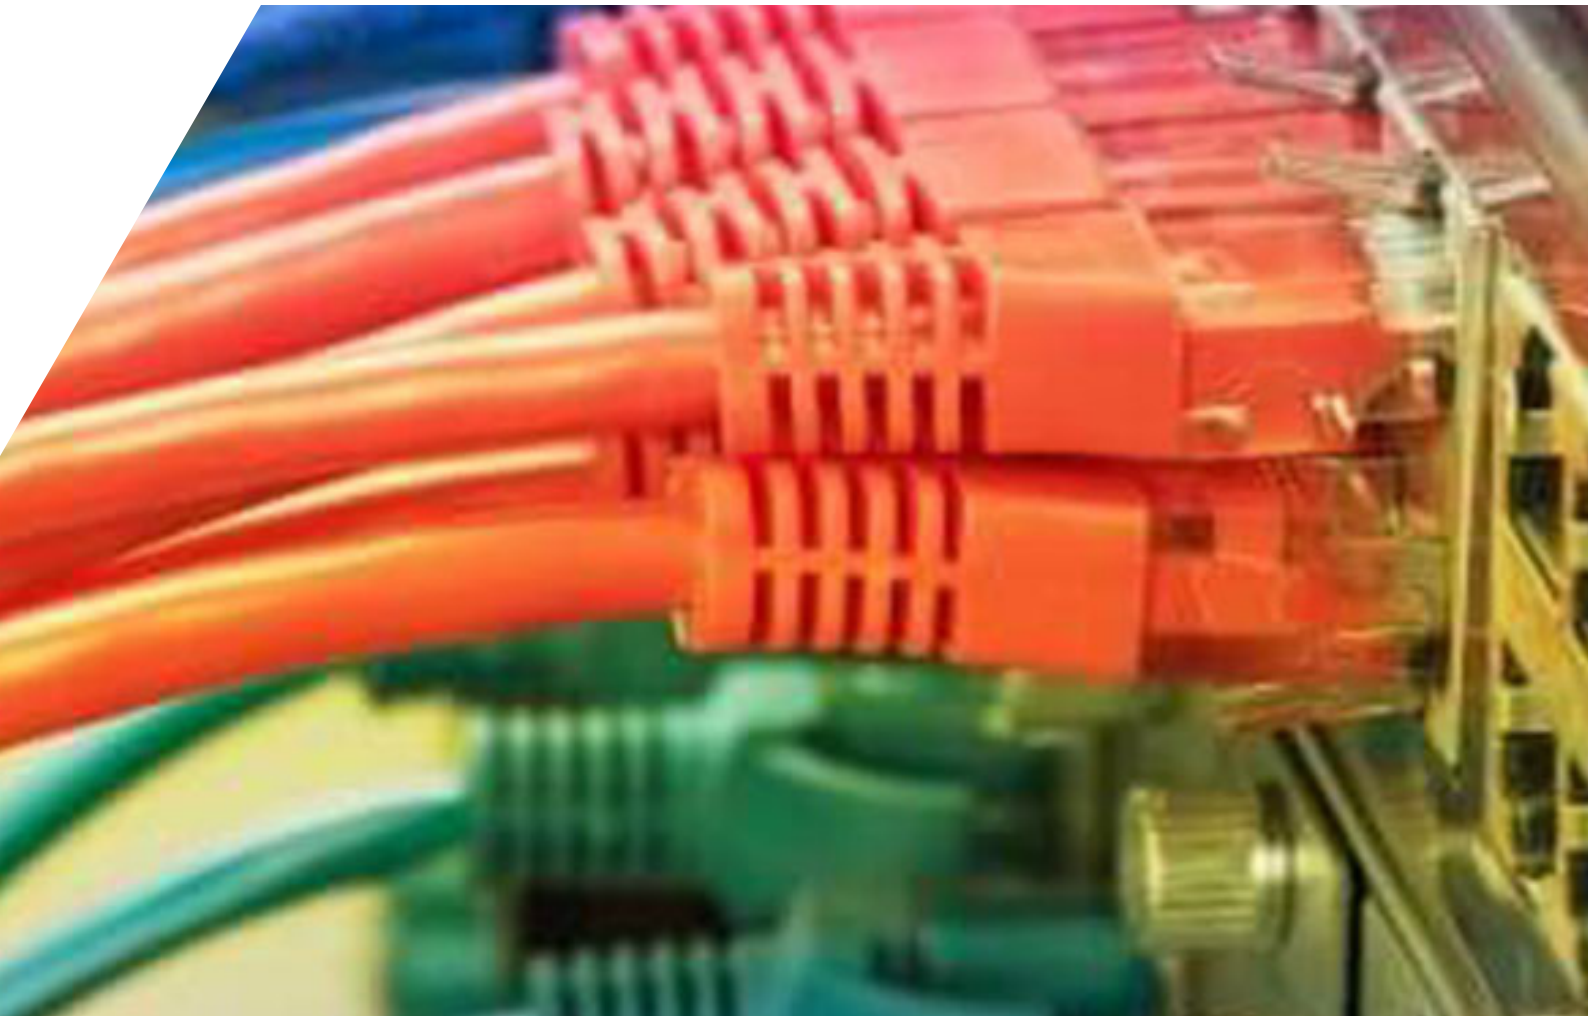

VIDEO CONFERENCING

Video collaboration plays an increasingly important role as the world moves to communication methods that encompass more than just audio. Yealink video conferencing solutions allow participants to make video calls and share content to meeting participants anywhere in the world. Yealink video conferencing devices are easy to use and install, with intuitive user interfaces and feature rich designs. Video conferencing participants can also choose to join a meeting from their desktop phones or even mobile devices for communication on the move.

CONNECTING THE WORLD

EXCHANGE SERVICES

Not all organisations are ready to move to cloud-based services because, in many cases, these services don't have the comprehensive functionality they require. However there's now no reason why an organisation can't host desktop applications on a virtual private server. This provides an organisation with the best of both worlds: the ability to continue using highly featured systems combined with hosting them in a secure, private cloud infrastructure.

- Server hosting configured to your needs
- Windows 2012 R2 / 2016
- Remote desktop licenses for connecting to the service
- Panda Adaptive Defence 360 cyber security protection
- Data backup
- Disaster recovery
- Fully managed service

DEVELOPMENT

Bringing Technology closer to you,
Empower your business with quality software, purpose-built for your
requirement

DESIGN | INNOVATE | CREATE

Our team is responsible for development, design, deployment and implementation of both new and modified software products, as well as ongoing business projects, giving you the power to enhance your existing business, or propel your startup enterprise to success.

Our collective experience and expertise help you to achieve and exceed your business goals, maximizing your reach through the power of phenomenal software.
